[Step 1: Fit your harness](#)

[Step 2: Training](#)

Welcome

to your new PetSafe® Easy Walk® Harness!

A few things to keep in mind:

Acclimation time will vary for each dog.

Have treats available during the fitting and training process.

Avoid leaving harness on when not in use to avoid chew damage.

Use a four to six foot non-retractable leash.

Not intended to be used as a tie-out.

Understanding your harness

- A O-ring**
Rests just behind the shoulder blades.
- B No-pull attachment**
Martingale loop helps prevent pulling when leash is connected to the D-ring.
- C Shoulder strap**
Adjustable strap that sits across your dog's shoulders.
- D Girth strap**
Adjustable strap that sits under your dog's chest. Strap is a different color than the rest of the harness.
- E Chest strap**
Sits across the front of your

one across the front of your dog's chest. Features the no-pull attachment.

Step 1: Fit your harness

Prepare

Proper fitting is necessary for the no-pull function to correct the behavior and avoid chafing. Keep the following in mind when fitting the harness on your dog:

-  Your dog must be standing the entire time the harness is being fit.
-  Encourage your dog with praise and treats.
-  Fit the harness in a stress-free, quiet environment.
-  Dogs may tense up during the fitting process. Check the harness fit after a few minutes of wear.

Have the following available during the fitting process:

Easy Walk Harness

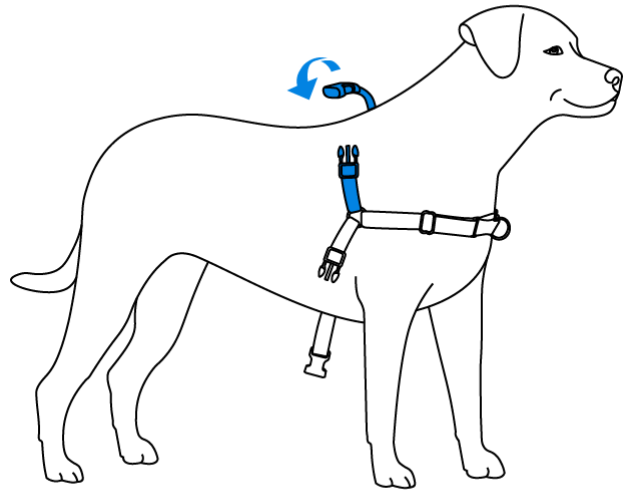

Treats

Adjust shoulder strap

1 Unbuckle the shoulder and girth straps.

2 Place the harness over your dog's back with the martingale loop centered on the breast bone. Buckle the shoulder strap.

- 3 Adjust the shoulder strap so the O-rings on either side of the harness sit above and behind your dog's shoulder blades.

Adjust girth strap

- 1 Buckle the girth strap.

Note: The girth strap is a different color than the rest of the harness.

- 2 Adjust until the strap is snug around your dog's chest and a T-shape is formed.

Adjust chest strap

- 1 Use the slide buckles to adjust the chest strap.

- 2 Adjust both sides of the chest strap equally until the strap is snug and centered on your dog's chest.

Important: Loose fitting straps can cause chafing and encourage chewing of the harness.

Check fit

Snug fit

Make sure that two fingers fit snugly between the shoulder strap and your dog.

T-shape

Check that the girth strap creates a vertical line and the chest strap creates a horizontal line, forming a horizontal T-shape.

Step 2: Training

To help make wearing the harness a positive experience for your dog, continue to offer praise while acclimating to the harness.

Important: The harness is not recommended for jogging, running, bike attachments or couplers.

Have the following ready to assist in acclimation:

Treats

Praise

Four to six foot non-retractable leash

No-pull training

Tension on the leash corrects unwanted behavior by redirecting your dog into the correct position.

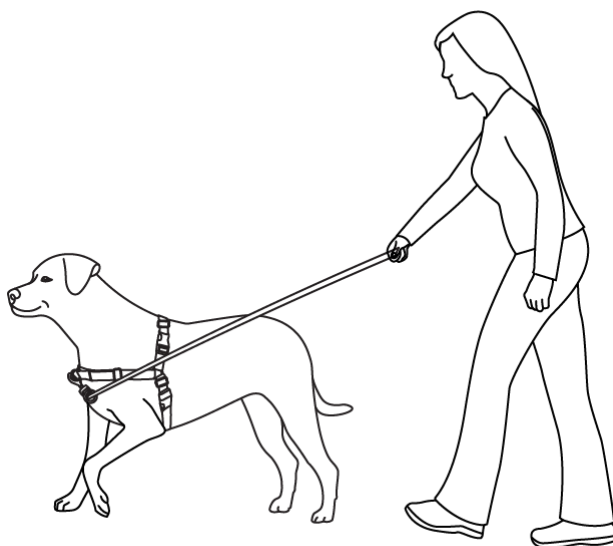

No tension on the leash rewards your dog for good behavior.

1 Start with your dog standing next to your side.

2 Begin walking. Reward your dog with treats and praise when he walks next to your side with a loose leash.

3 As soon as there is tension on the leash, redirect your dog to your side by slowing down or stopping.

Important: Never jerk or yank the leash.

- 4 Reward your dog with treats and praise when he is next to your side with a loose leash and begin walking again.

 Repeat steps 1-4 until your dog walks calmly by your side with a loose leash.
