Welcome

to your new PetSafe® Sure-Fit Harness®.

A few things to keep in mind:

-  Acclimation time will vary for each dog.
-  Avoid leaving harness on when not in use.
-  Have treats available during the fitting process.

Proper fit:

Offer treats and praise to your dog during and after measurements.

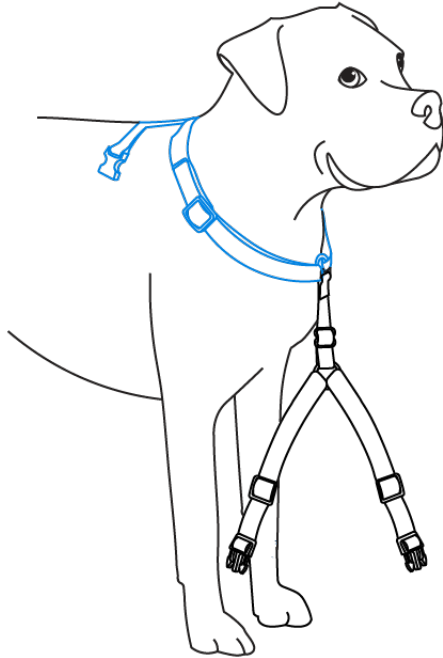

- 1** Measure the girth of your dog behind the front legs and around the rib cage.

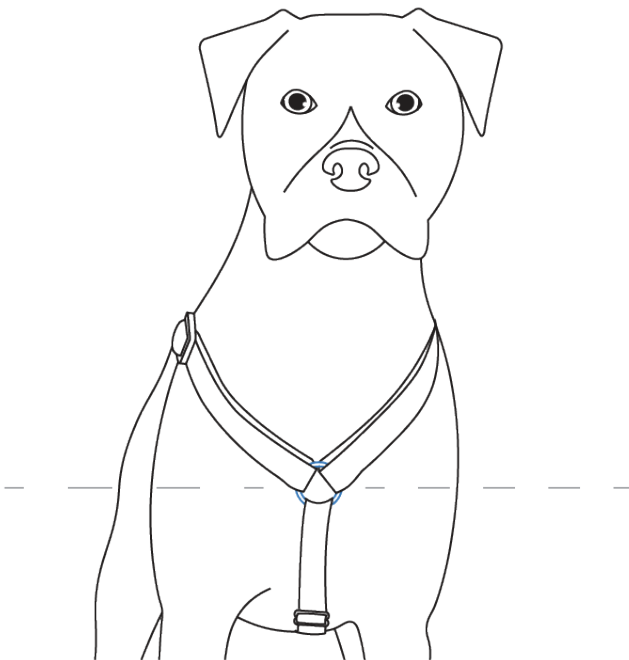

Girth Measurement	Size
12" - 16"	Petite
15" - 21"	X-Small
18" - 22"	Medium
22" - 30"	Large
28" - 42"	Size

- 2** Choose the appropriate size harness based on girth measurements.

Adjust shoulder strap:

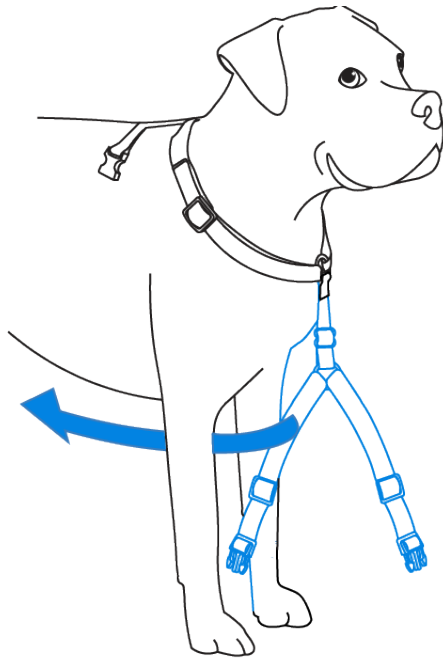

- 1 With the harness unbuckled, place the shoulder straps over your dog's head.

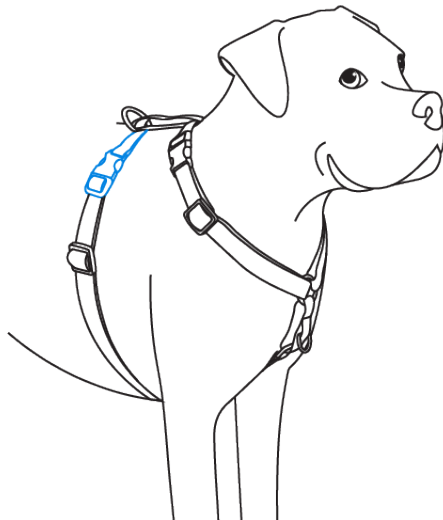

- 2 Adjust the shoulder straps so that the O-ring sits on or above your dog's chest bone.

Adjust the girth strap:

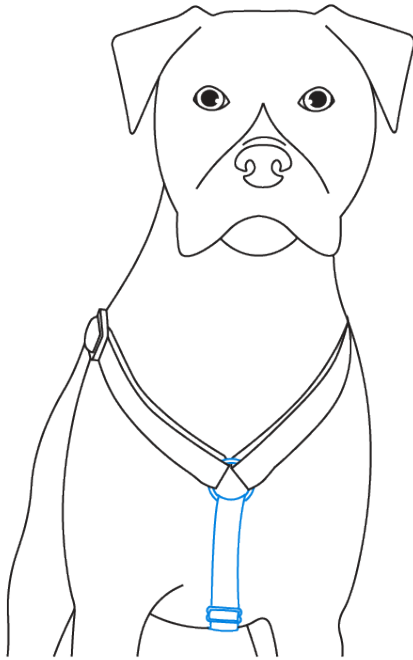

- 1 Bring the girth strap between your dog's front legs.

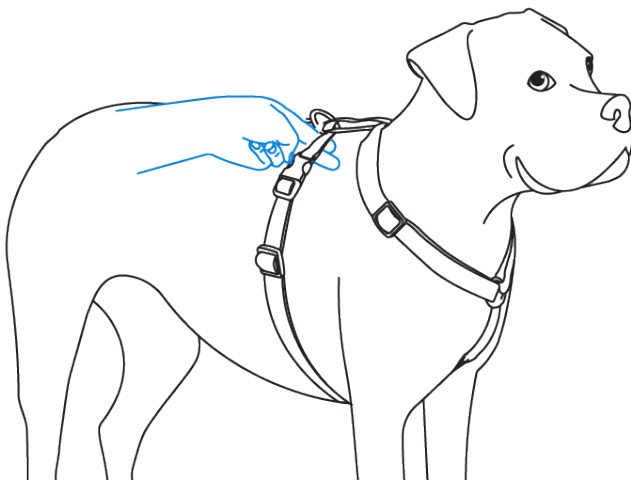

- 2** Attach the girth straps to the buckles on your dog's back. Adjust for a snug fit.

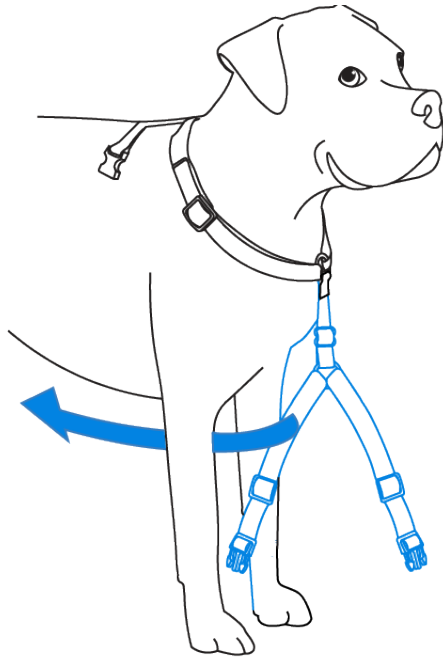

- 3** Adjust the strap under your dog's chest to ensure it is not hanging loose.

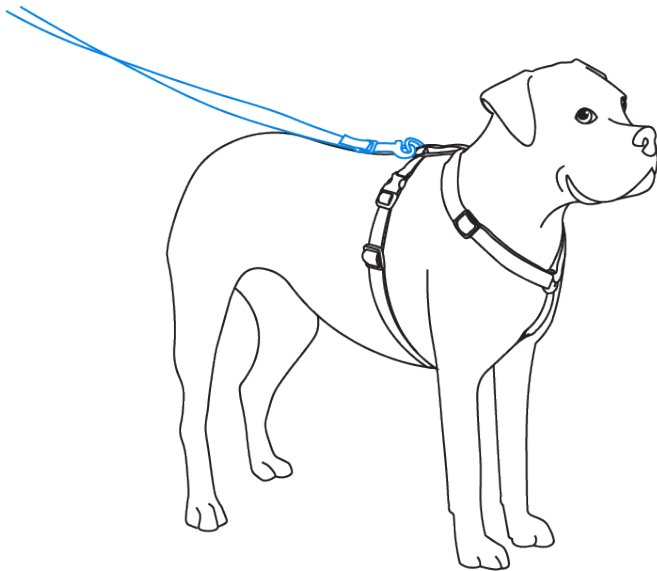

- 4** When fit properly, two fingers should barely fit between the skin and nylon strap. This prevents the harness from moving and chafing your dog's skin.

Step 2: How to use

- 1** Place the properly fitted harness on your dog.

- 2** Attach a leash to the D-ring and have your dog walk calmly beside you.
